

OUR TOWERS OF PLASTIC

OUR TOWERS OF PLASTIC

Stefano Cendron
Debora Tonini

FIRST STEP: How our bottles must be?

First of all the bottles we collect must be still in want piece, without any holes.

This is the kind of Pet bottles we are looking for.
- 1,5 L;
- with cap on;
- empty;

In this way the bottles are more resistant and they can carry more weight

We don't need only plastic bottles with the same shape or with the same colour.

All the kind of pet bottles are fine. the important thing is that they have to be 1,5L empty plastic bottles

We want to find a solution who connect bottles of different shape

SECOND STEP: How to connect the bottles?

Adhesive Tape

Plastic Bottle

Bottles of different kind

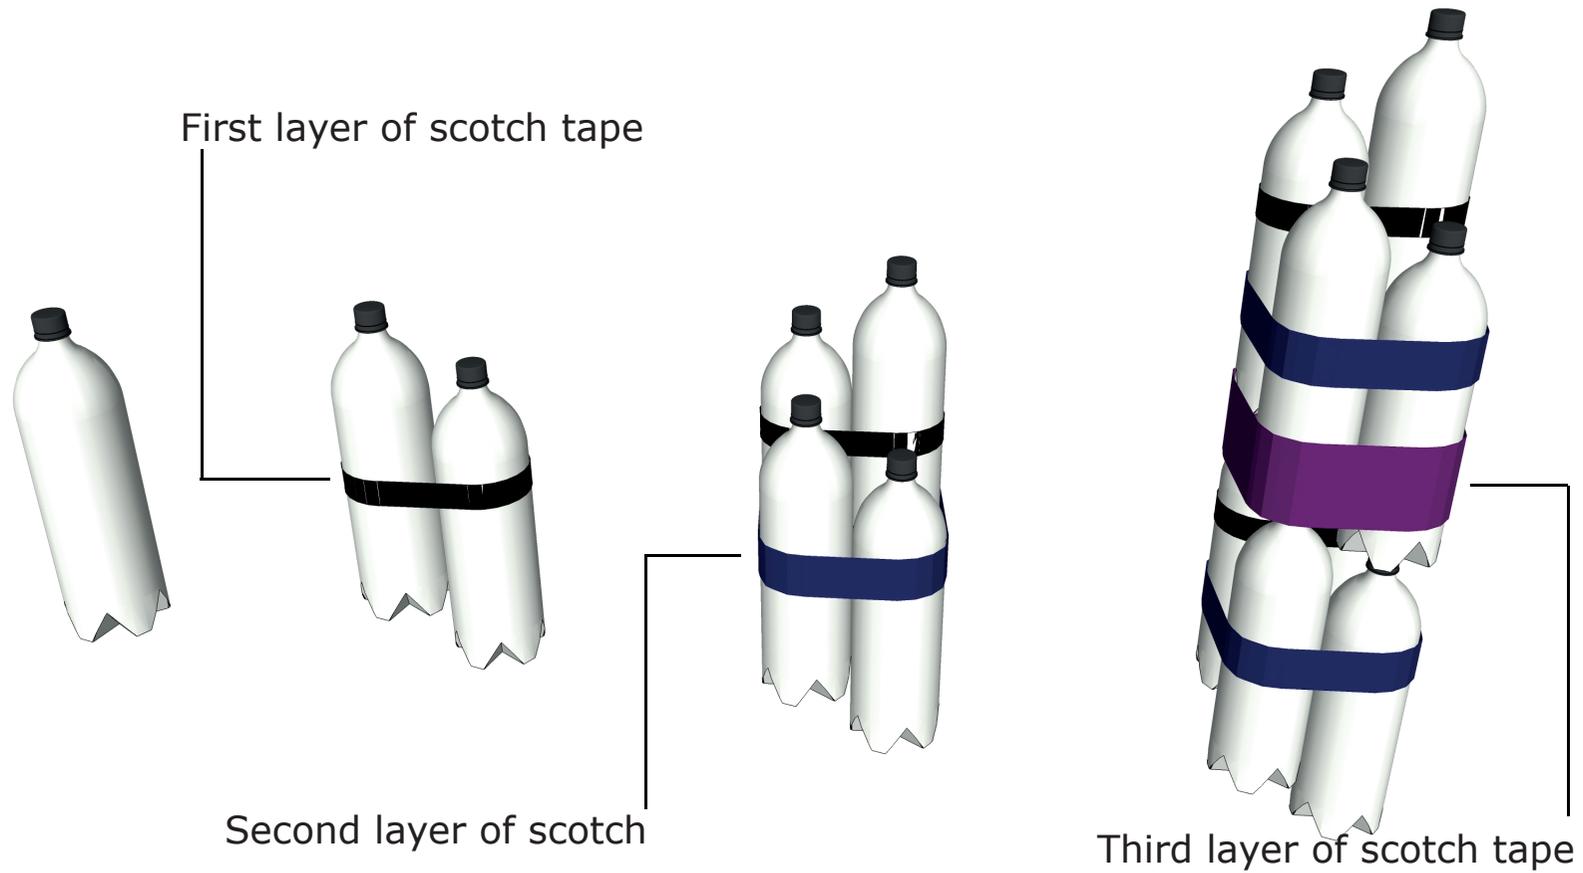

We can connect 2 bottles together using the adhesive tape

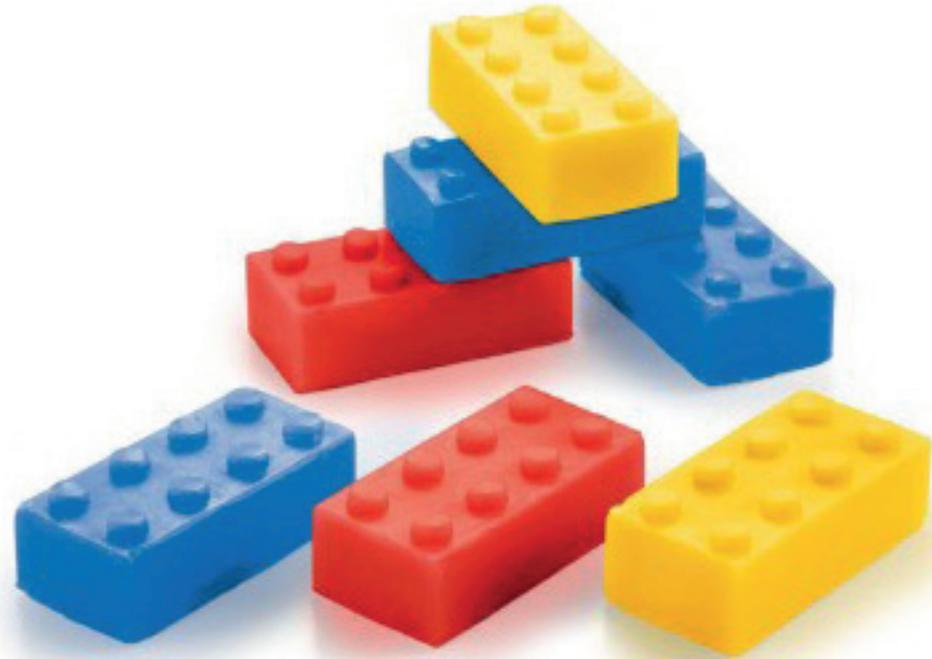

and then more and more together till we don't have this basic element.

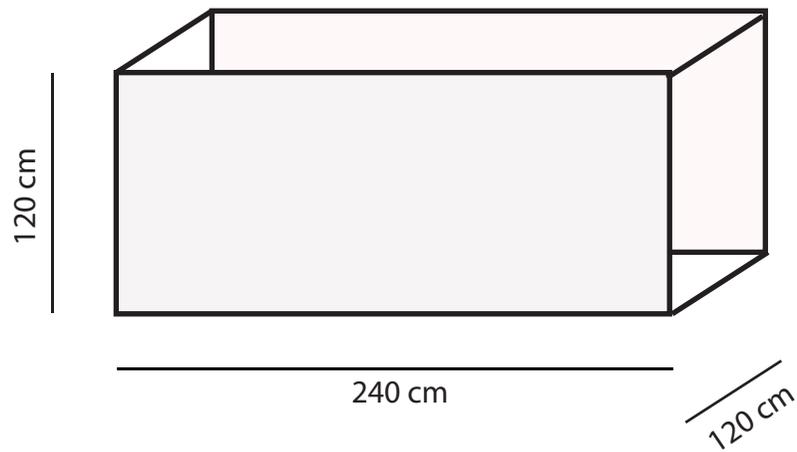

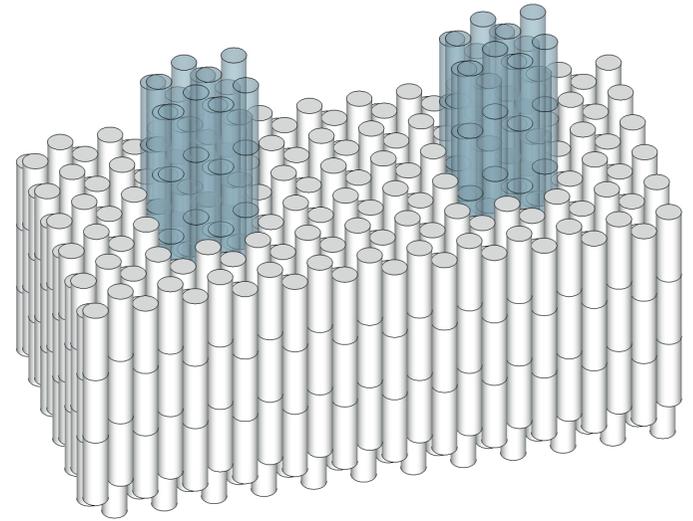

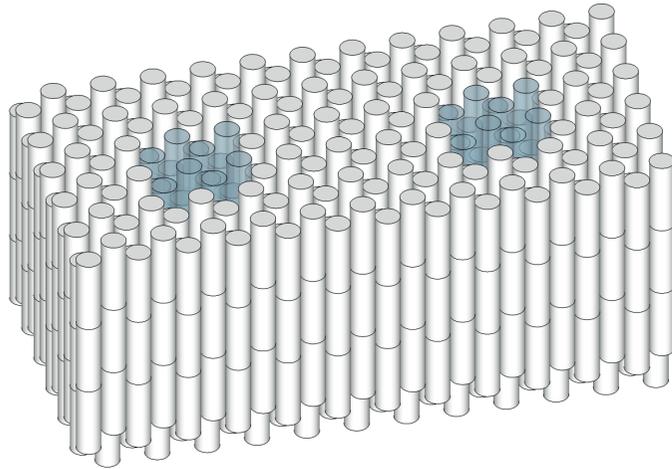

THIRD STEP: How to put together our basic element?

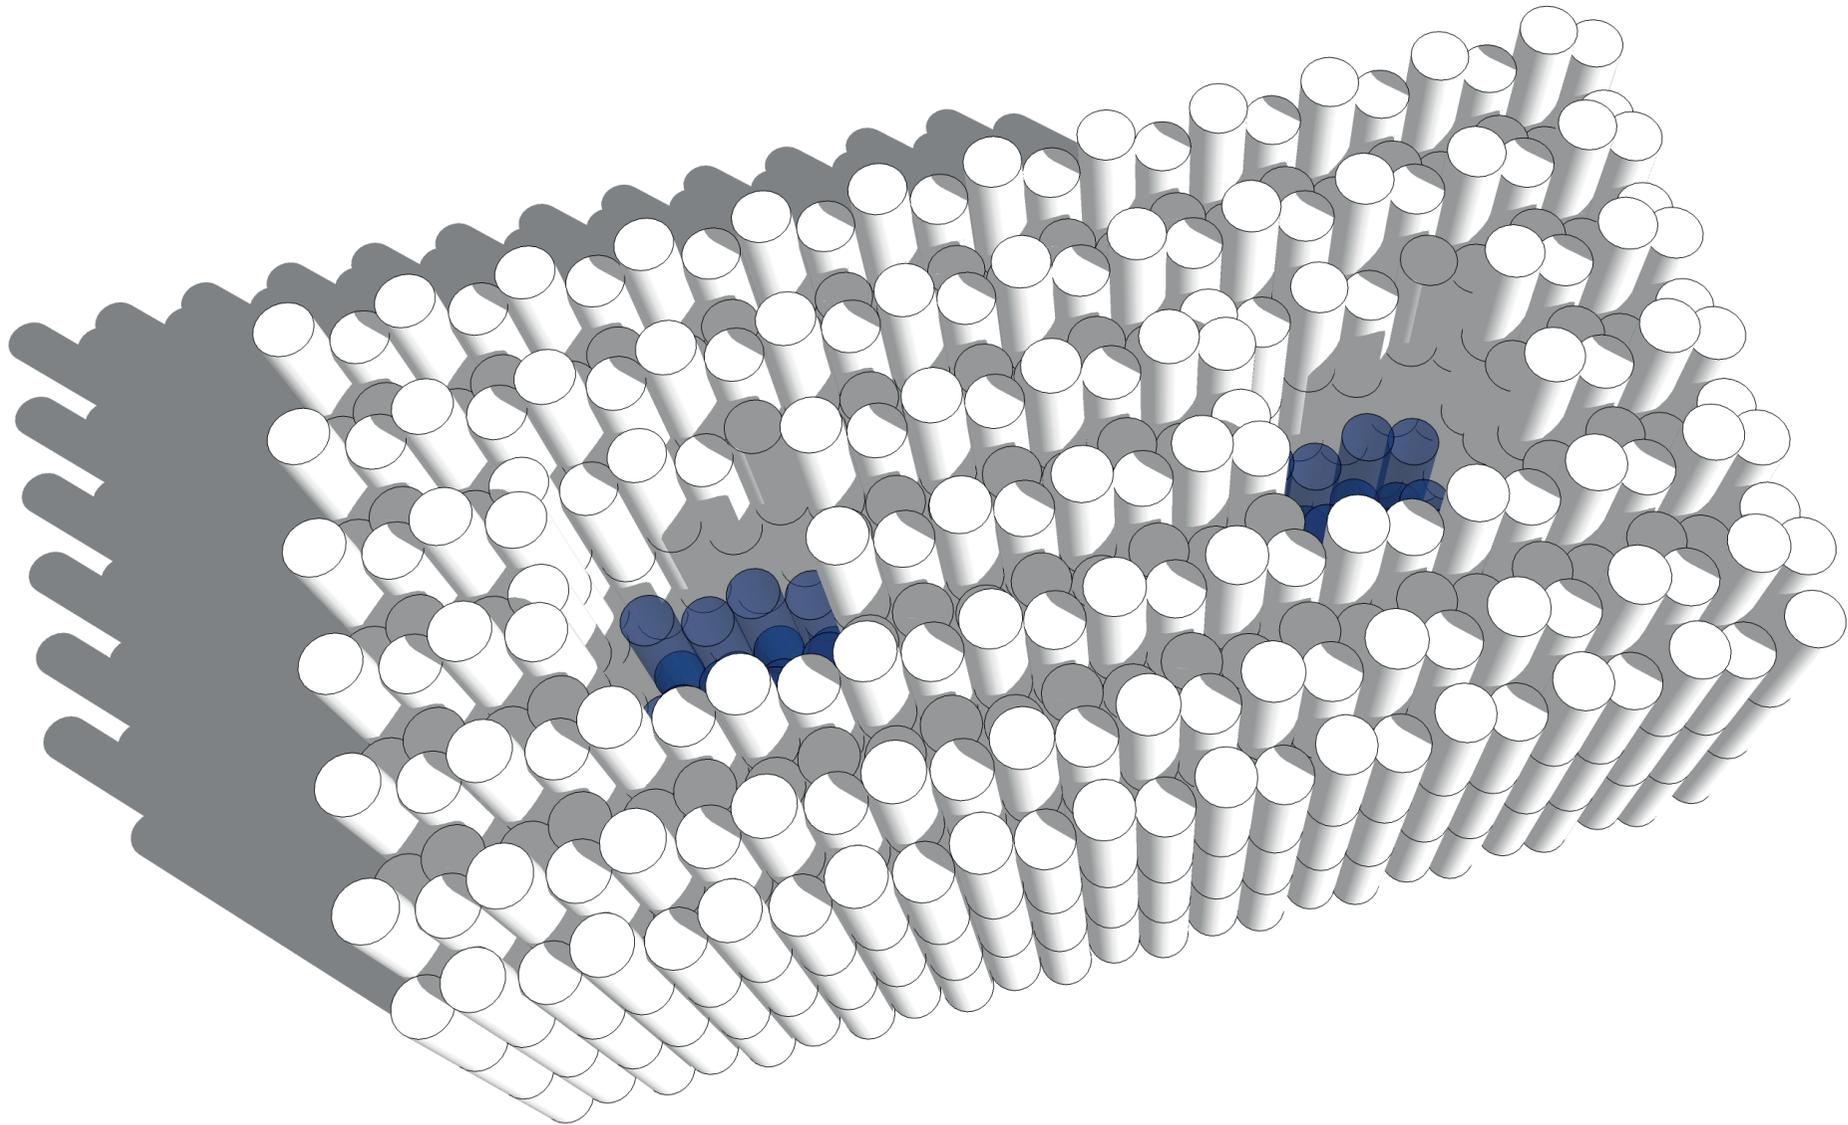

MAIN AIM:
Create a basic element easy to assemble.

BASIC ELEMENT OF OUR TOWER
864 plastic bottles in each element;

HOLLOWS in our element to allow the connections between more basic elements.

The basic element is rotated and fitted together just like bricks in a wall.
