

The background of the slide is a grayscale photograph of a building's facade. It features a series of arched windows and a balcony with a decorative railing. The image is slightly blurred, giving it a soft, artistic feel.

SMART CITIES

L4 13.3.2017

Spring Semester 2017, ETH Zürich

Gerhard Schmitt

Smart Cities

1 GS ET: Introduction	Definitions Context	3 GS: Urban Big Data	4 GS ET: Urban Measurement	5 GS: Urban Science	6 GS: Complexity Science	7 GS: Smart Governance	8 GS: Smart Livability	10 GS: From smart cities to responsive cities
Objectives, Definition, MOOC	Smart Objects, Smart Buildings, Smart Cities	Stocks and Flows in Urban Systems	Measurement and Simulation	Citizen Design Science	Complexity Science	Participatory Design and Management	City Livability Rankings	From smart cities to responsive cities
Exercise 1: QUA-KIT			Exercise 2: Urban Measurement	Exercise 3: QUA-KIT				Final presentation on MOOC discussion topics

The story so far:

- 13.3.2017 Can you improve what you do not measure?
- 6.3.2017 Big Data as new urban raw material, made useful with Information Architecture and with the Stocks and Flows concept
- 27.2.2017 From smart houses to smart cities – emerging criteria for smart cities as urban systems
- 20.2.2017 Cities are complex systems. Ideally, they are sustainable, resilient, livable, smart, and finally responsive – from production machines to human habitat

Quote from „The Responsive City“

“I have a rule of thumb: if you can't measure it, you can't manage it”

June 2014, Michael Bloomberg, Former Mayor of New York City

Countries agree to curb powerful greenhouse gases in largest climate breakthrough since Paris

Sat, Oct 15, 2016

- Reducing emissions of hydrofluorocarbons (HFCs) under the Kigali Amendment can prevent up to 0.5°C of global warming, while continuing to protect the ozone layer
- HFCs consumption to be reduced in 2019 in developed countries and frozen in 2024 and 2028 in developing countries

Email 3 Tweet 75 Share 16 Share 1 G+ 0

President of the 28th Meeting of the Parties to Montreal Protocol in Kigali, Vincent Biruta of Rwanda, brings the gavel down marking the adoption of the Kigali Amendment

Kigali, 15 October 2016 - Nearly 200 countries struck a landmark deal today to reduce the emissions of powerful greenhouse gases, hydrofluorocarbons (HFCs), in a move that could prevent up to 0.5 degrees Celsius of global warming by the end of this century.

ETH Zürich ist Weltspitze

RANKING In einer Rangliste der weltbesten Universitäten in 46 Fächern belegt die ETH Zürich zum dritten Mal in Folge den ersten Platz bei den Erdwissenschaften.

Das Quacquarelli Symonds (QS) Ranking listet die Eidgenössisch-Technische Hochschule Zürich (ETH) in insgesamt zehn Fächern unter den Top 10. Verbessern konnte sich die ETH insbesondere im Fach Architektur, in dem sie zwei Plätze gutmachte und nun Rang 5 belegt. Auch in Umweltwissenschaften, Mathematik, Informatik und dem Fächerkomplex Physik und Astronomie rangiert die Hochschule unter den besten zehn Institutionen weltweit, wie QS gestern mitteilte.

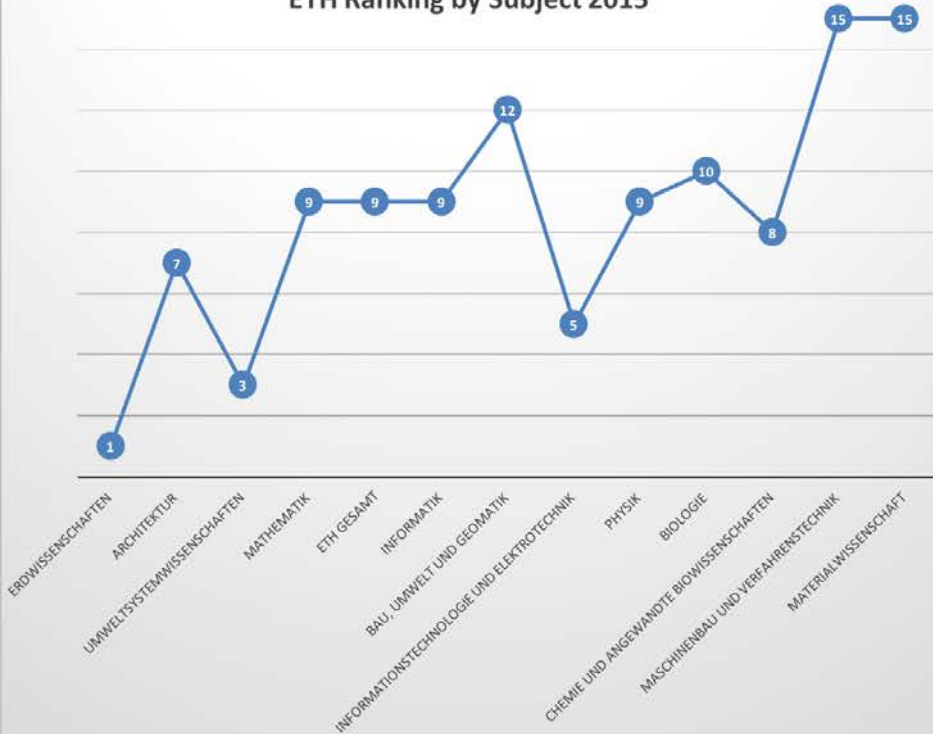

Auch die ETH Lausanne konnte sich in drei Fächern unter den Top 20 platzieren, namentlich in Materialwissenschaft, Physik und Astronomie sowie in Elektrotechnik.

Die Universität Zürich schaffte es in dem erstmals bewerteten Fach Anatomie und Physiologie auf Platz 20 weltweit.

Insbesondere die Hotelfachschulen in der Schweiz können sich über Spitzenplätze freuen: Gleich drei landten in ihrem Fach unter den Top 10: Ecole Hôtelière de Lausanne (Rang 2), Les Roches International School of Hotel Management (Rang 4) und die Swiss Hotel Management School (Rang 8). Nur die USA sind mit vier Plätzen häufiger unter den weltbesten zehn im Hotelfach vertreten.

Habitat Research

Based on science → measurement and simulation

Influenced by people → behaviour

- **Building Research:** Understanding Buildings and their interaction with people, cities, stocks and flows
- **Urban Research:** Understanding Cities and their interaction with people, territories, stocks and flows → Complex Systems
- **Territorial Research:** Understanding regions, countries, and their interaction with stocks and flows → Complex Systems

Smart Cities Criteria India - Europe

- Indian Ministry of Urban Development

- 1 adequate water supply
- 2 assured electricity supply
- 3 sanitation, including solid waste management
- 4 efficient urban mobility and public transport
- 5 affordable housing, especially for the poor
- 6 robust IT connectivity and digitalization
- 7 good governance, especially e-Governance and citizen participation
- 8 sustainable environment
- 9 safety and security of citizens, particularly women, children and the elderly
- 10 health and education

- European Innovation Partnership on Smart Cities and Communities

- 1 Sustainable Urban Mobility
- 2 Districts and Built Environment
- 3 Integrated Infrastructures
- 4 Citizen Focus
- 5 Policy and Regulation
- 6 Integrated Planning and Management
- 7 Knowledge Sharing
- 8 Baseline, Performance Indicators and Metrics
- 9 Open Data
- 10 Standards
- 11 Business Models, Finance and Procurement
- 12 General Implementation Modes

Know the criteria for selecting Smart Cities

News18.com

First published: January 28, 2016, 4:01 PM IST | Updated: January 28, 2016

In the approach of the Smart Cities Mission, the objective of the government is to promote cities that provide core infrastructure and give a decent quality of life to its citizens, a clean and sustainable environment and application of 'Smart' Solutions.

The focus of the mission is on sustainable and inclusive development and the idea is to look at compact areas, create a replicable model which will act like a light house to other aspiring cities.

Case study

ESUM- Analyzing trade-offs between Energy and Social performance of Urban Morphologies

Location Wiedikon Zürich

14 survey checkpoints along experimental path

Case study

ESUM- Analyzing trade-offs between Energy and Social performance of Urban Morphologies

Data from 37 participants in Zurich to:

- Investigate impact of constant (urban morphology) and dynamic features (environmental sensors) of the built environment on perception (using surveys and biofeedback data)

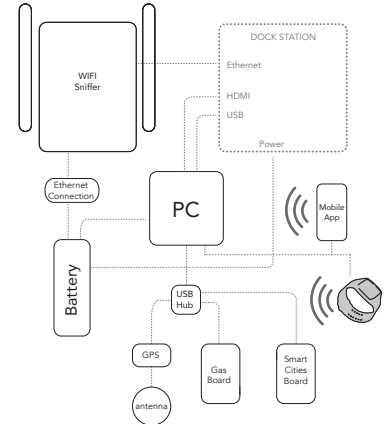

Fig. 2. Four instances of narrow-spacious spatial configurations and their corresponding pathpoints along the select path.

Mobile sensor equipment

Sensor-backpack with environmental and position sensors

Mobile Sensor equipment

Biofeedback wristband

E4 Sensors

PPG Sensor
Photoplethysmography Sensor - Measures Blood Volume Pulse (BVP), from which heart rate, heart rate variability (HRV), and other cardiovascular features may be derived

3-axis Accelerometer
Captures motion-based activity

Event Mark Button
Tags events and correlate them with physiological signals

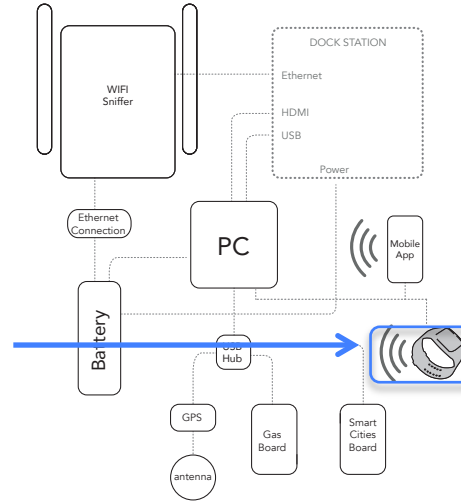

EDA Sensor (GSR Sensor)
Electrodermal Activity Sensor - Used to measure sympathetic nervous system arousal and to derive features related to stress, engagement, and excitement.

Infrared Thermopile
Reads peripheral skin temperature

Internal Real-Time Clock
Temporal resolution up to 0.2 seconds in streaming mode

ESUM- Analyzing trade-offs between Energy and Social performance of Urban Morphologies

Device	Sensor/ Measurement	units	Measurement range	Measurement frequency	Accuracy	Response time
WaspCity	Sound Pressure	dB	50-100 dB	0.4 Hz	±2.5 dB	Not Given
	Luminosity	%	0-100% (400- 700 nm)	0.4 Hz	Resistive sensor 20MOhm (Darkness) 5-20 kOhm(Light)	Not Given
	Dust	mg/m3	Typical 0.5V/(0.1mg/m3)	0.4 Hz	Operating supply voltage 5±0.5V	10±1ms
WaspGas	Temperature	C	-40 ~ 125 C	0.25 Hz	±2 C(0-70 C), ±4 C(<0 C, >70C)	1.65 seconds
	Atmospheric Pressure	kPa	15 - 115 kPa	0.25 Hz	<±1.5% V	20 ms
	Humidity	%RH	0-100% RH	0.25 Hz	<±4% RH (a 25C, range 30-80%), ±6 %RH(range 0-100)	<15 seconds
Meshlium Scanner AP			Wifi Scanner (50-200m) Bluetooth Scanner (20-30m)		Measurement range depends on he antenna and line of sight to the device	
	Wifi Scanner	MAC address		push values @ 0.016 Hz		60 seconds
	Wifi Scanner	AP		push values @ 0.016 Hz		
	Wifi Scanner	RSSI (Received Signal Strenght Indicator)	-40 dBm (nearest node) to -90 dBm (marthes nodes)	push values @ 0.016 Hz	distance of 10m ~=(50dBm), 50m ~=(75dBm)	
Mobile Device	GPS	Lat/Long	outdoor only	variable, dependent on device satellite connection		
	Survey	12 questions, scale -2 to 2	NA	At checkpoint		
GPS	GPS	Lat/Long	outdoor only	1 Hz		
Bioteedback Wristband		Sensor output: Blood Volume Pulse (BPV)		64 Hz	0.9 nW/Digit	
	PPG (Photoplethysmography)					
	EDA (Electrodermal Activity)		0.01 mSiemens -100 mSiemens	4 Hz		
	Skin Temperature Infrared thermopile	C	-40-115 C	4 Hz	±0.2 C within 36-39 C	
	3 Axis accelerometer	x, y, z		32 Hz		

Data Processing: ESUM Experiment

Data cleaning: unified date/time, convert WGS84 spherical coordinates to CH1903 planar coordinates

A screenshot of an Excel spreadsheet showing a data table with 29 rows and 13 columns. The table contains numerical data, and the cell C7 is highlighted with a blue border. The data is as follows:

Measurements for the Smart City:

Estefania Tapias

Data, Information and Knowledge

A 3D architectural rendering of a city block. The buildings are represented as white, blocky models. A central area, possibly a courtyard or a specific building complex, is highlighted with a vibrant, multi-colored overlay. This overlay transitions from blue at the edges to green and then to yellow and red in the center, suggesting a heat map or a simulation of light intensity or shadow. The surrounding city area is shown in a lighter, more uniform tone, with some buildings having subtle shadows cast onto the ground.

The transformation from data to information and knowledge is one of the most important activities in every society and are the elements that structure the Information Architecture concept.

Tapias, E. 2013. Shadow rage simulation and visibility analysis. Residential area in Altstetten, Zurich

Data

“We refer to data as the smallest entities of information, as values given to objects, expressions, functions or properties. Data becomes information by interpretation.”

Gerhard Schmitt, Information City

Tapias, E. 2016. Weather data from mini portable weather stations.

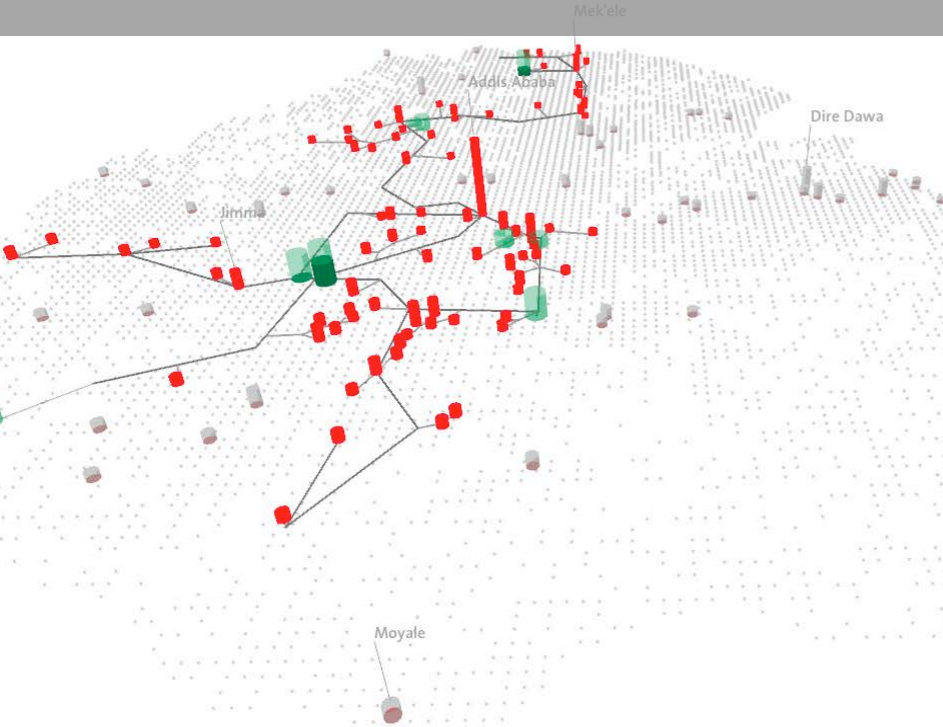

Information

Connections or relations of data results in information.

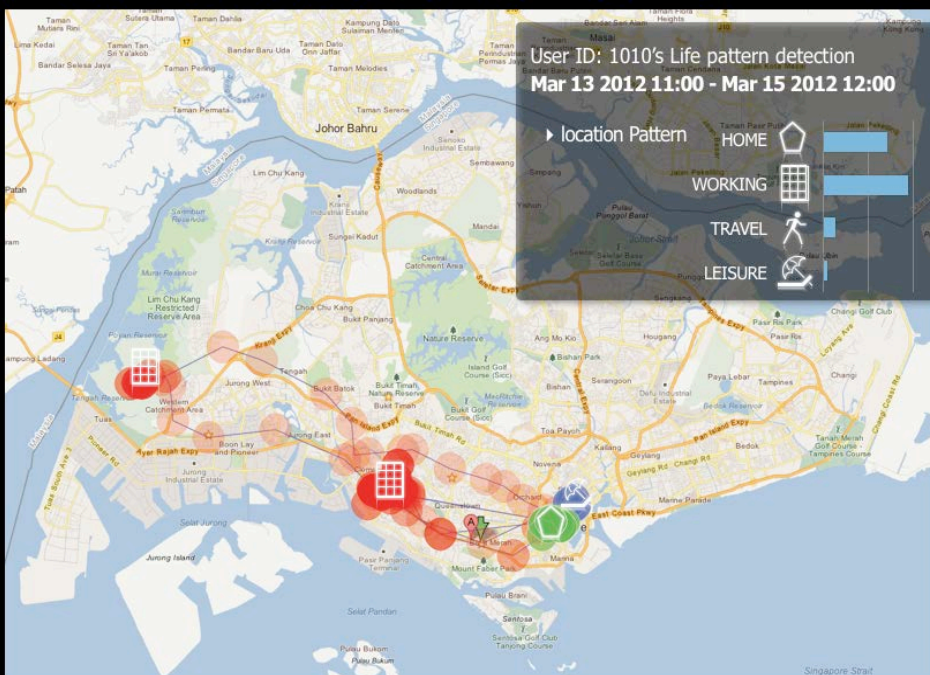

Readings from a weather station console showing weather parameters.

Data collection

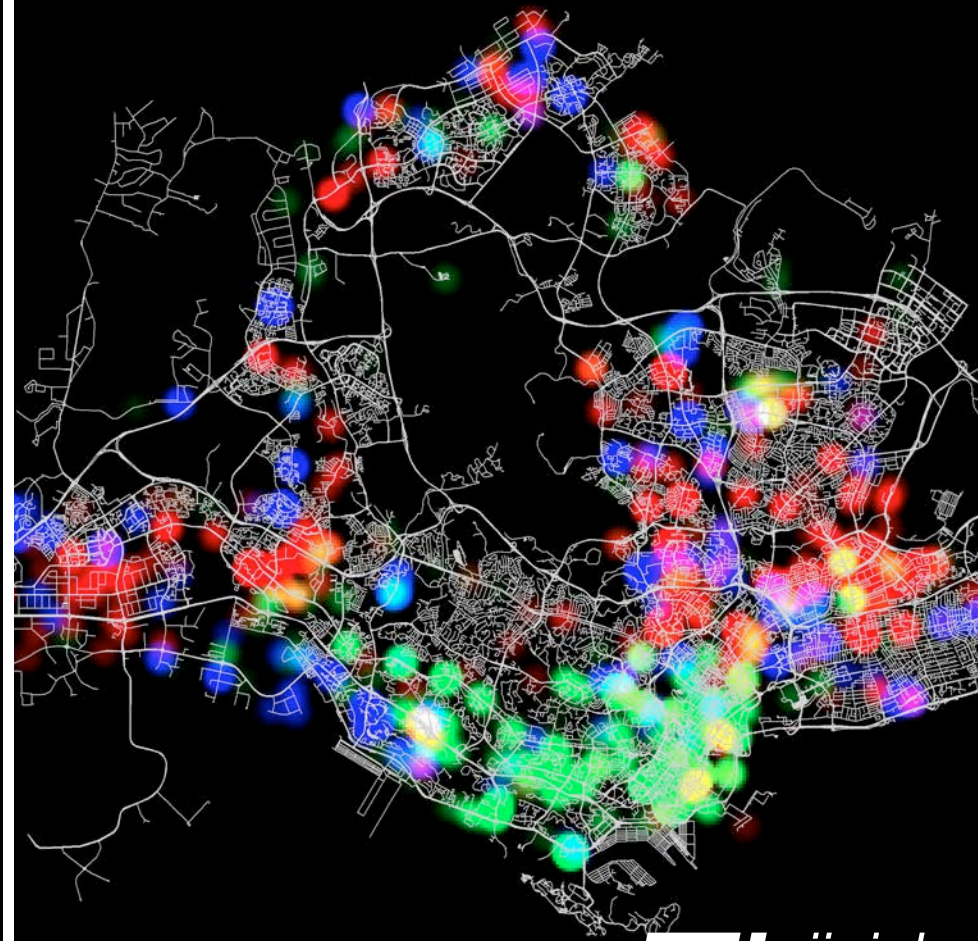

The basic assumption here is that we can only improve the performance of a system, such as a city, if we know its present performance.

Friedrich, E. 2013. An interactive tool for modelling Ethiopia's energy future.

Yearly Weather Summary

11/05/15 09:00:00

Calendar Year

High Temperature	37.1°C at 09/13/15 14:09:07
Low Temperature	23.6°C at 06/07/15 19:38:52
High Heat Index	51.4°C at 09/13/15 14:06:23
Low Wind Chill	23.6°C at 06/07/15 19:38:52
High Humidity	96% 06/03/15 06:16:15
Low Humidity	52% 07/13/15 12:06:31
High Dewpoint	28.6°C 09/23/15 10:48:52
Low Dewpoint	18.2°C 03/07/15 01:34:13
High Barometer	1013.2 hPa at 03/20/15 09:41:02
Low Barometer	1001.5 hPa at 07/03/15 16:45:02
Rain Total	179.2 mm
High Rain Rate	137.2 mm/hr at 10/02/15 13:35:00
High Wind Speed	17.9 m/s from 61° at 03/04/15 00:19:28
Average Wind	2.3 m/s
RMS Wind	3.0 m/s
Vector Average Speed	2.6 m/s
Vector Average Direction	35°
High Inside Temperature	32.7°C at 06/29/15 13:29:02
Low Inside Temperature	21.8°C at 03/19/15 07:15:00
High UV	10.7 at 10/02/15 11:30:00
Low UV	0.0 at 01/01/15 00:00:01
High ET	0.8 mm at 02/22/15 13:00:00
Low ET	0.0 mm at 01/01/15 00:05:00
High Radiation	1225 W/m² at 08/18/15 11:21:52
Low Radiation	0 W/m² at 01/08/15 00:03:26

-3	-2	-1	0	1	2
2.1 Sensación Térmica					
¿Que siente usted en este momento con respecto a la temperatura?					
<input type="checkbox"/> Mucho frío	<input type="checkbox"/> Frío	<input type="checkbox"/> Un poco de frío	<input type="checkbox"/> Ni frío/Ni calor	<input type="checkbox"/> Un poco de calor	<input type="checkbox"/> Mucho Calor
2.2 Grado de Satisfacción					
¿Cuál es su grado de satisfacción respecto a la temperatura en este momento?					
<input type="checkbox"/> Satisfecho	<input type="checkbox"/> Neutro	<input type="checkbox"/> Insatisfecho			
2.3 Preferencia Térmica					
¿Que preferiría sentir en este momento con respecto a la temperatura?					
<input type="checkbox"/> Mas fresco	<input type="checkbox"/> Igual, sin cambios	<input type="checkbox"/> Mas Calor			
2.4 Percepción de la humedad					
¿Que siente usted en este momento con respecto a la humedad?					
<input type="checkbox"/> Muy húmedo	<input type="checkbox"/> Húmedo	<input type="checkbox"/> Un poco húmedo	<input type="checkbox"/> Normal	<input type="checkbox"/> Un poco seco	<input type="checkbox"/> Muy Seco
2.5 Grado de Satisfacción					
¿Cuál es su grado de satisfacción respecto a la humedad en este momento?					
<input type="checkbox"/> Satisfecho	<input type="checkbox"/> Neutro	<input type="checkbox"/> Insatisfecho			
2.6 Preferencia					
¿Cómo preferiría sentir la humedad en este momento?					
<input type="checkbox"/> Mas Húmedo	<input type="checkbox"/> Igual, sin cambios	<input type="checkbox"/> Más seco			
2.7 Percepción del viento					
¿Cómo siente el viento en este momento?					
<input type="checkbox"/> Ningún Viento	<input type="checkbox"/> Poco viento	<input type="checkbox"/> Viento moderado	<input type="checkbox"/> Viento muy fuerte		
2.8 Grado de Satisfacción					
¿Cuál es su grado de satisfacción respecto al viento en este momento?					
<input type="checkbox"/> Satisfecho	<input type="checkbox"/> Neutro	<input type="checkbox"/> Insatisfecho			
2.9 Preferencia					
¿Cómo preferiría sentir al viento en este momento?					
<input type="checkbox"/> Preferiría mas viento	<input type="checkbox"/> Igual sin cambios	<input type="checkbox"/> Preferiría menos viento			
2.10 Percepción del soleamiento					
¿Cómo siente el sol en este momento?					
<input type="checkbox"/> Sin Sol	<input type="checkbox"/> Poco Sol	<input type="checkbox"/> Un poco fuerte	<input type="checkbox"/> Sol muy fuerte		
2.11 Grado de Satisfacción					
¿Cuál es su grado de satisfacción respecto al sol en este momento?					
<input type="checkbox"/> Satisfecho	<input type="checkbox"/> Neutro	<input type="checkbox"/> Insatisfecho			
2.12 Preferencia sobre el tema					
¿Cómo preferiría sentir el sol en este momento?					
<input type="checkbox"/> Preferiría mas sol	<input type="checkbox"/> Igual, sin cambios	<input type="checkbox"/> Preferiría menos sol			
2.13 Percepción del confort térmico					
En general usted se siente con respecto al clima:					
<input type="checkbox"/> Confortable	<input type="checkbox"/> Inconfortable				
3. Datos del individuo					
3.1 Sexo					
<input type="checkbox"/> Hombre	<input type="checkbox"/> Mujer				
3.2 Estatura (m):					
3.3 Peso (Kg):					
3.4 Edad:					
3.5 ¿Ha vivido siempre en Barranquilla?					
3.6 Si NO, Con respecto a Barranquilla su lugar de procedencia es:					
<input type="checkbox"/> Mas frío <input type="checkbox"/> Igual <input type="checkbox"/> Mas caliente					
3.7 ¿Desde cuando está en Barranquilla?					
<input type="checkbox"/> 1 semana <input type="checkbox"/> > 1 mes <input type="checkbox"/> 1 - 6 Meses <input type="checkbox"/> > 6 Meses					
3.8 Con respecto a otros usted generalmente siente:					
<input type="checkbox"/> Mas frío <input type="checkbox"/> Igual <input type="checkbox"/> Mas caliente					
4. Datos por observación					
4.1 Vestimenta					
Observación en caso de otro tipo de vestimenta:					
<input type="checkbox"/> Ligera ropa de verano	<input type="checkbox"/> Gorra				
<input type="checkbox"/> Cubierta ropa de invierno	<input type="checkbox"/> Sombrilla				
<input type="checkbox"/> Gafas					
4.2 Actividad					
<input type="checkbox"/> Pasiva <input type="checkbox"/> Moderada <input type="checkbox"/> Intensa					
(En el momento) (Sentado/de pie inmóvil) (Marcha/de pie en movimiento) (Trote/Marcha rápida)					
Observaciones:

Climate-sensitive Urban Adaptation

Crowdsourcing – Barranquilla Colombia

El Proyecto Confort es una iniciativa para la ciudad de Barranquilla que busca recolectar datos con relación al confort térmico de los ciudadanos. El proyecto nació en el marco de un proyecto de investigación científica impulsado por la ETH Zurich.

Exercise:

This week you learned about data collection in the city. In this exercise, you can put into action what you learned and collect qualitative and quantitative data in your city. Select one urban area in your city and collect data from the following variables:

1. Temperature (in degrees Celsius, °C)

(you can use a simple tool like a thermometer or download a smart phone application)

2. Thermal perception

(from 1 to 10 – 1 being “very cold” and 10 “very warm”)

3. Noise (in decibel, dB)

(you can use a sound/decibel meter with a smart phone application)

4. Noise perception

(from 1 to 10 - 1 being “no noise” and 10 being “a lot of noise” -)

5. General satisfaction

(Do you like the place you selected? from 1 to 10 – 1 being “not at all” and 10 “yes, very much” -)

(Note: Please make sure you are in an outdoor space.)

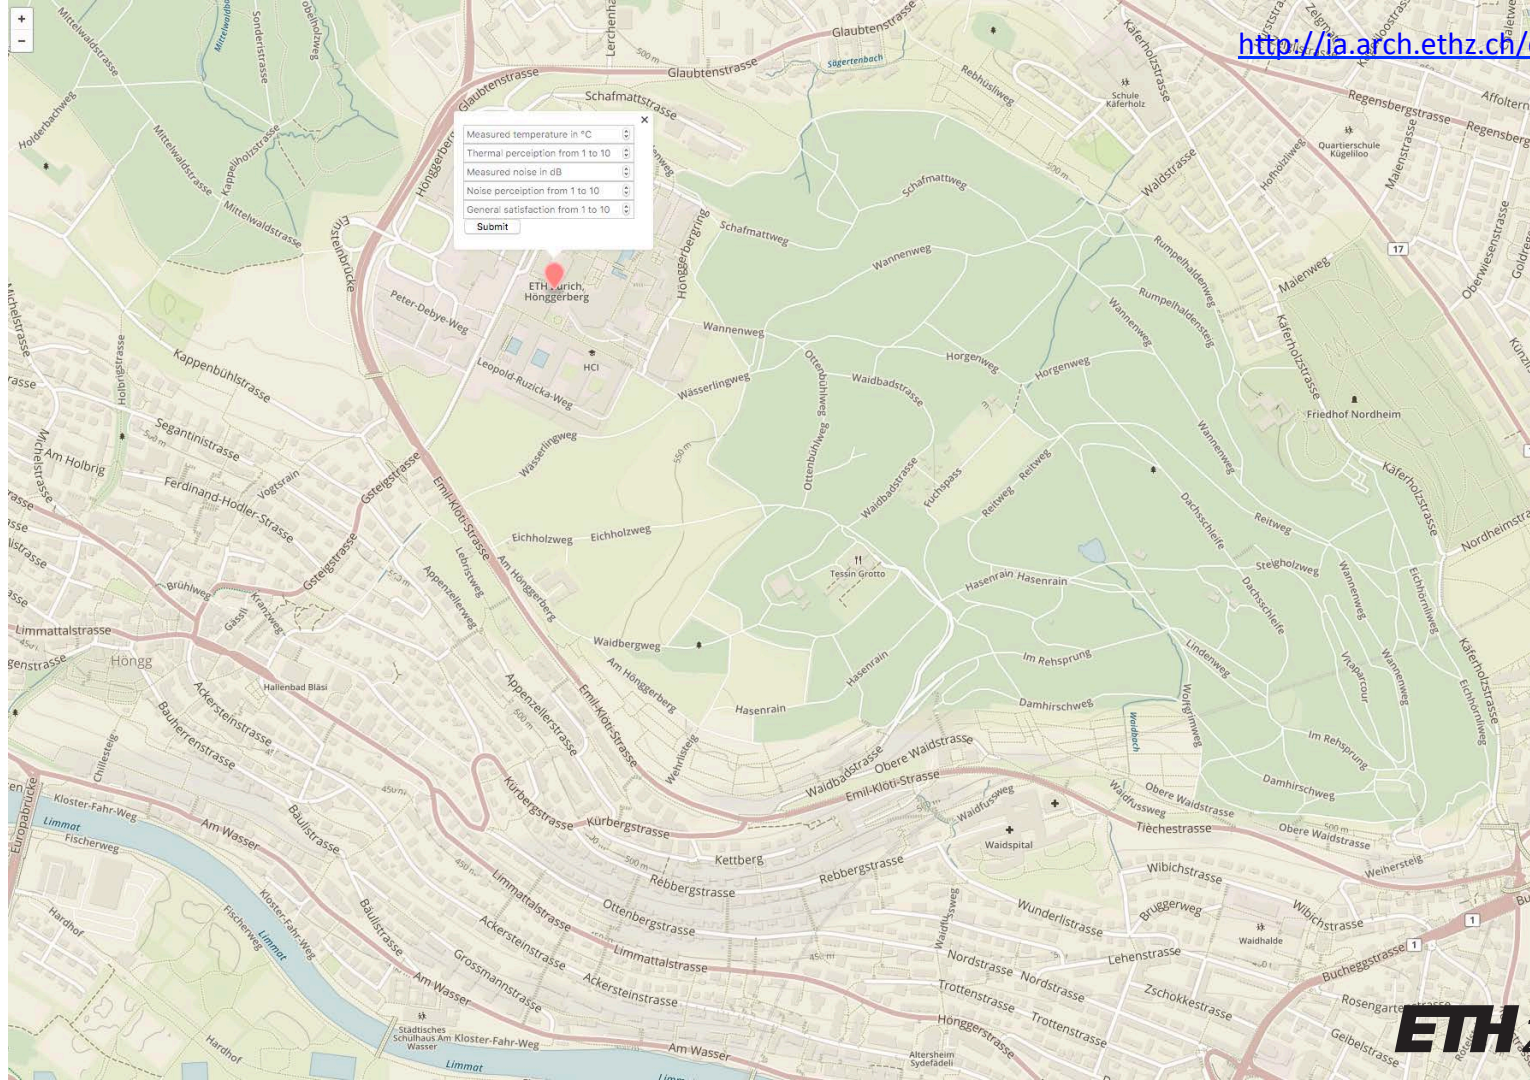

If you do not own a smartphone please skip variables 1 and 3.

When you finish, please enter your data together with the date and time of your recording in our online data collection tool using the following link;

MOOC discussion panel: This first week you will be asked to make groups of 3 to 4 people and start looking at the discussion developing in the discussion panel of the MOOC. After seminar week (27.03.2017) each group has to choose one interesting discussion and start participating by writing comments about the topic being discussed. The last lecture (15.05.2017) each group will have a 7 minutes presentation about the discussion they followed and how they contributed.

Lecture 1

Smart cities

Lecture 2

Big data and stocks and flows of information

Lecture 3

Measurements and simulations in the city

Compulsory Exercise 2

(BASED ON THE EXERCISE ON THE SMART CITIES MOOC)

Instructions for Exercise 2:

This week you learned about data collection in the city. In this exercise, you can put into action what you learned and collect qualitative and quantitative data in your city. Select one urban area in your city and collect data from the following variables:

1. Temperature (in degrees Celsius, °C)

(you can use a simple tool like a thermometer or download a smart phone application)

2. Thermal perception

(from 1 to 10 – 1 being "very cold" and 10 "very warm")

3. Noise (in decibel, dB)

(you can use a sound/decibel meter with a smart phone application)

4. Noise perception

(from 1 to 10 – 1 being "no noise" and 10 being "a lot of noise" -)

5. General satisfaction

(Do you like the place you selected? from 1 to 10 – 1 being "not at all" and 10 "yes, very much" -)

(Note: Please make sure you are in an outdoor space.)

If you do not own a smartphone please skip variables 1 and 3.

When you submit your data you don't need to mention your date and time as it will be recorded by app. You can access online data collection tool using the following link:

<http://ia.arch.ethz.ch/datamap/>

Additional part for ETH course:

- Different from the MOOC exercise, for the course you must select two places, one that you like and another one that you dislike. Make the two data entries for each location in the web map and make a screen shot of both. Create a word document and add the screen shot together with a description of the two places you selected. Describe also the aspects you like or dislike about each of the places.
- Using this world map (<http://www.ia.arch.ethz.ch/datamap/show.html>) with the results from last semester, select two places in the world where participants added data. Look at the data measured and the perceived data (qualitative and quantitative data) and try to analyze how people perceive the place in relation to the measured data. For instance, you can see that in one place the difference between the measured and perceived is not that different while in another place it is extremely different, or you can also analyze the data collected with the overall perception. Please make screen shot of the data from both places and create a word document with the analysis.

Please use the same document for both parts of the exercise.

Additional part for ETH course:

1. Select two places, one that you like and another one that you dislike. Make the two data entries for each location in the web map and make a screen shot of both. Describe the two places you selected including the aspects you like or dislike about each of the places.
2. Using this [world map](#) with the results from last semester, select two places in the world where participants added data. Look at the data measured and the perceive data (qualitative and quantitative data) and try to analyze how people perceive the place in relation to the measured data. Please make screen shot of the data from both places and create a word document with the analysis.

Please use the same document for both parts of the exercise.

Summary

- Urban research requires measurements, resulting in data. If data are combined, they turn into information. If information is combined, it turns into knowledge
- Information and knowledge, combined with observation and compliance, are needed to improve a city
- To understand urban systems, measurements are important on all scales: buildings and neighbourhoods, districts and cities, regions and territories
- Measurements are a necessary (but not sufficient) activity for quantitative and qualitative urban improvements
- Ignoring information and knowledge, or not having access to it, can be deadly → transportation → Pompei
